

FIN AI

# FIN-AI: MULTI MODEL FINANCIAL ANALYSIS SYSTEM

Business

By: Carissa Paul, Anesh Thangaraj, Rachel Aska, Isheanesu Chiworeso

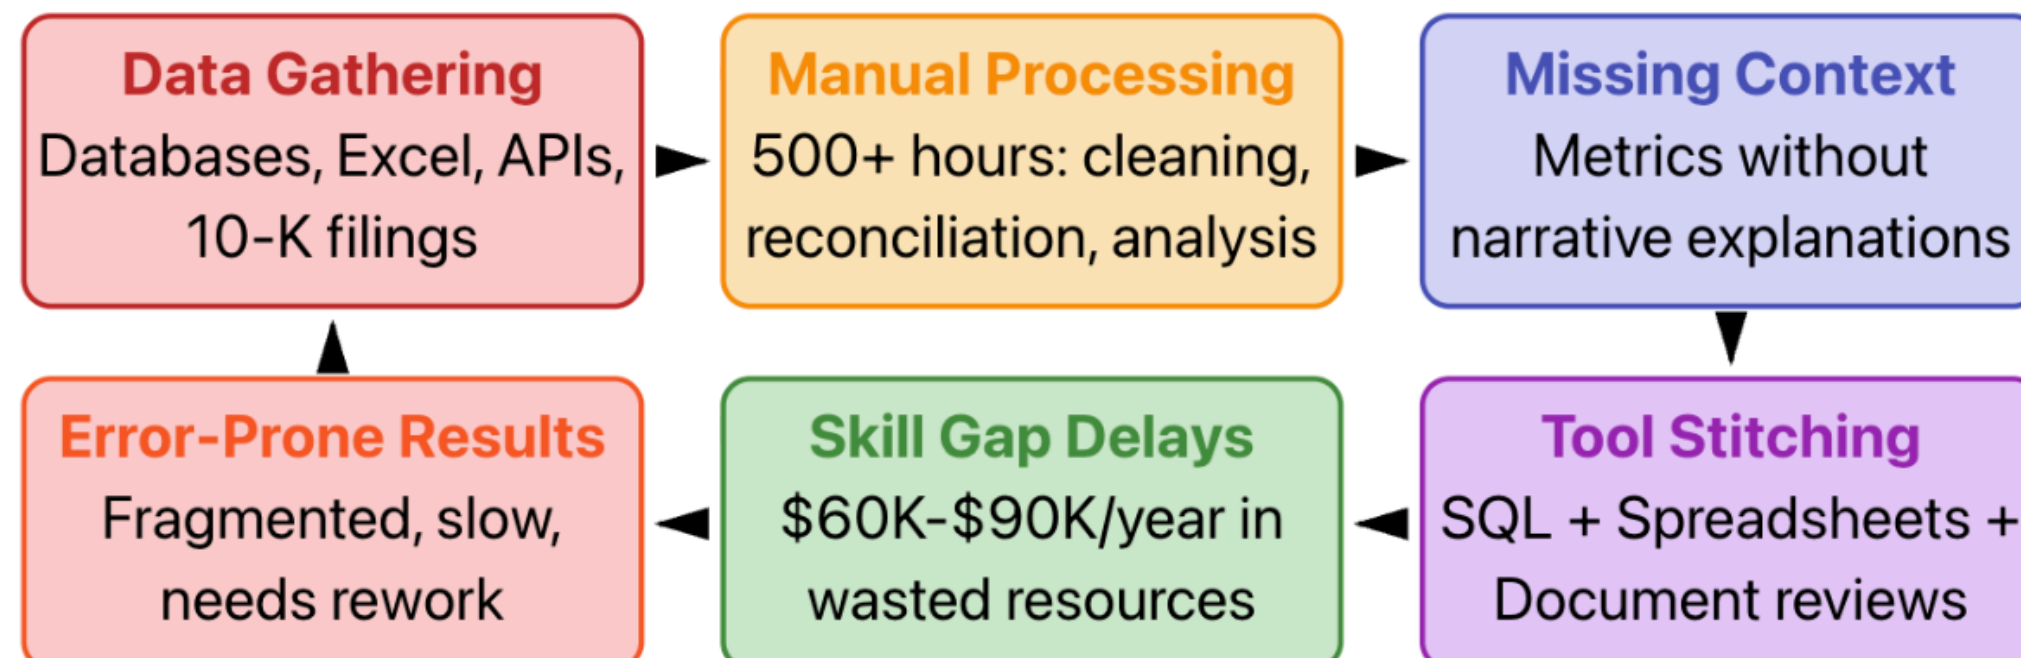

## EXECUTIVE SUMMARY

**Provide** CFOs and finance teams with a single AI platform that unifies structured financials and unstructured 10-K insights for rapid, defensible analysis.

**Combine** PostgreSQL financial data, macro indicators, stock prices, and SEC filings with a hybrid Lang Graph + GPT system (SQL, RAG, Hybrid) for fully cited, multi-source answers.

**Build an AI-powered financial intelligence agent** that makes margin analysis, benchmarking, forecasting, and risk evaluation faster, more accurate, and accessible to non-technical users.

## BUSINESS PROBLEM

### CFOs Lack a Centralized, AI-Powered Financial Intelligence Platform

Data is scattered across systems and formats, making it difficult to explain performance drivers, benchmark peers, identify risks, and deliver fast, defensible insights at scale.

## INTRODUCING FINAI

An **AI-powered financial intelligence** platform that unifies structured financial data and unstructured 10-K content into one system for fast, defensible CFO analysis.

**Combines** PostgreSQL financials, macro indicators, stock data, and SEC filings with a hybrid LangGraph + GPT engine (SQL, RAG, Hybrid) to deliver fully cited, multi-source insights.

**Automates** revenue, margin, cash flow, risk, and peer benchmarking analysis—clearly connecting performance metrics to narrative explanations from filings.

**Provides** CFO-grade answers through natural language, eliminating spreadsheet wrangling, manual SQL, and hours of document review.

### A Unified AI System for Financial Understanding:

Transforms scattered financial workflows into one platform that interprets numbers, context, and risks with audit-ready accuracy in seconds.

## DATA STRATEGY & SETUP

### Client and Benchmarking Setup

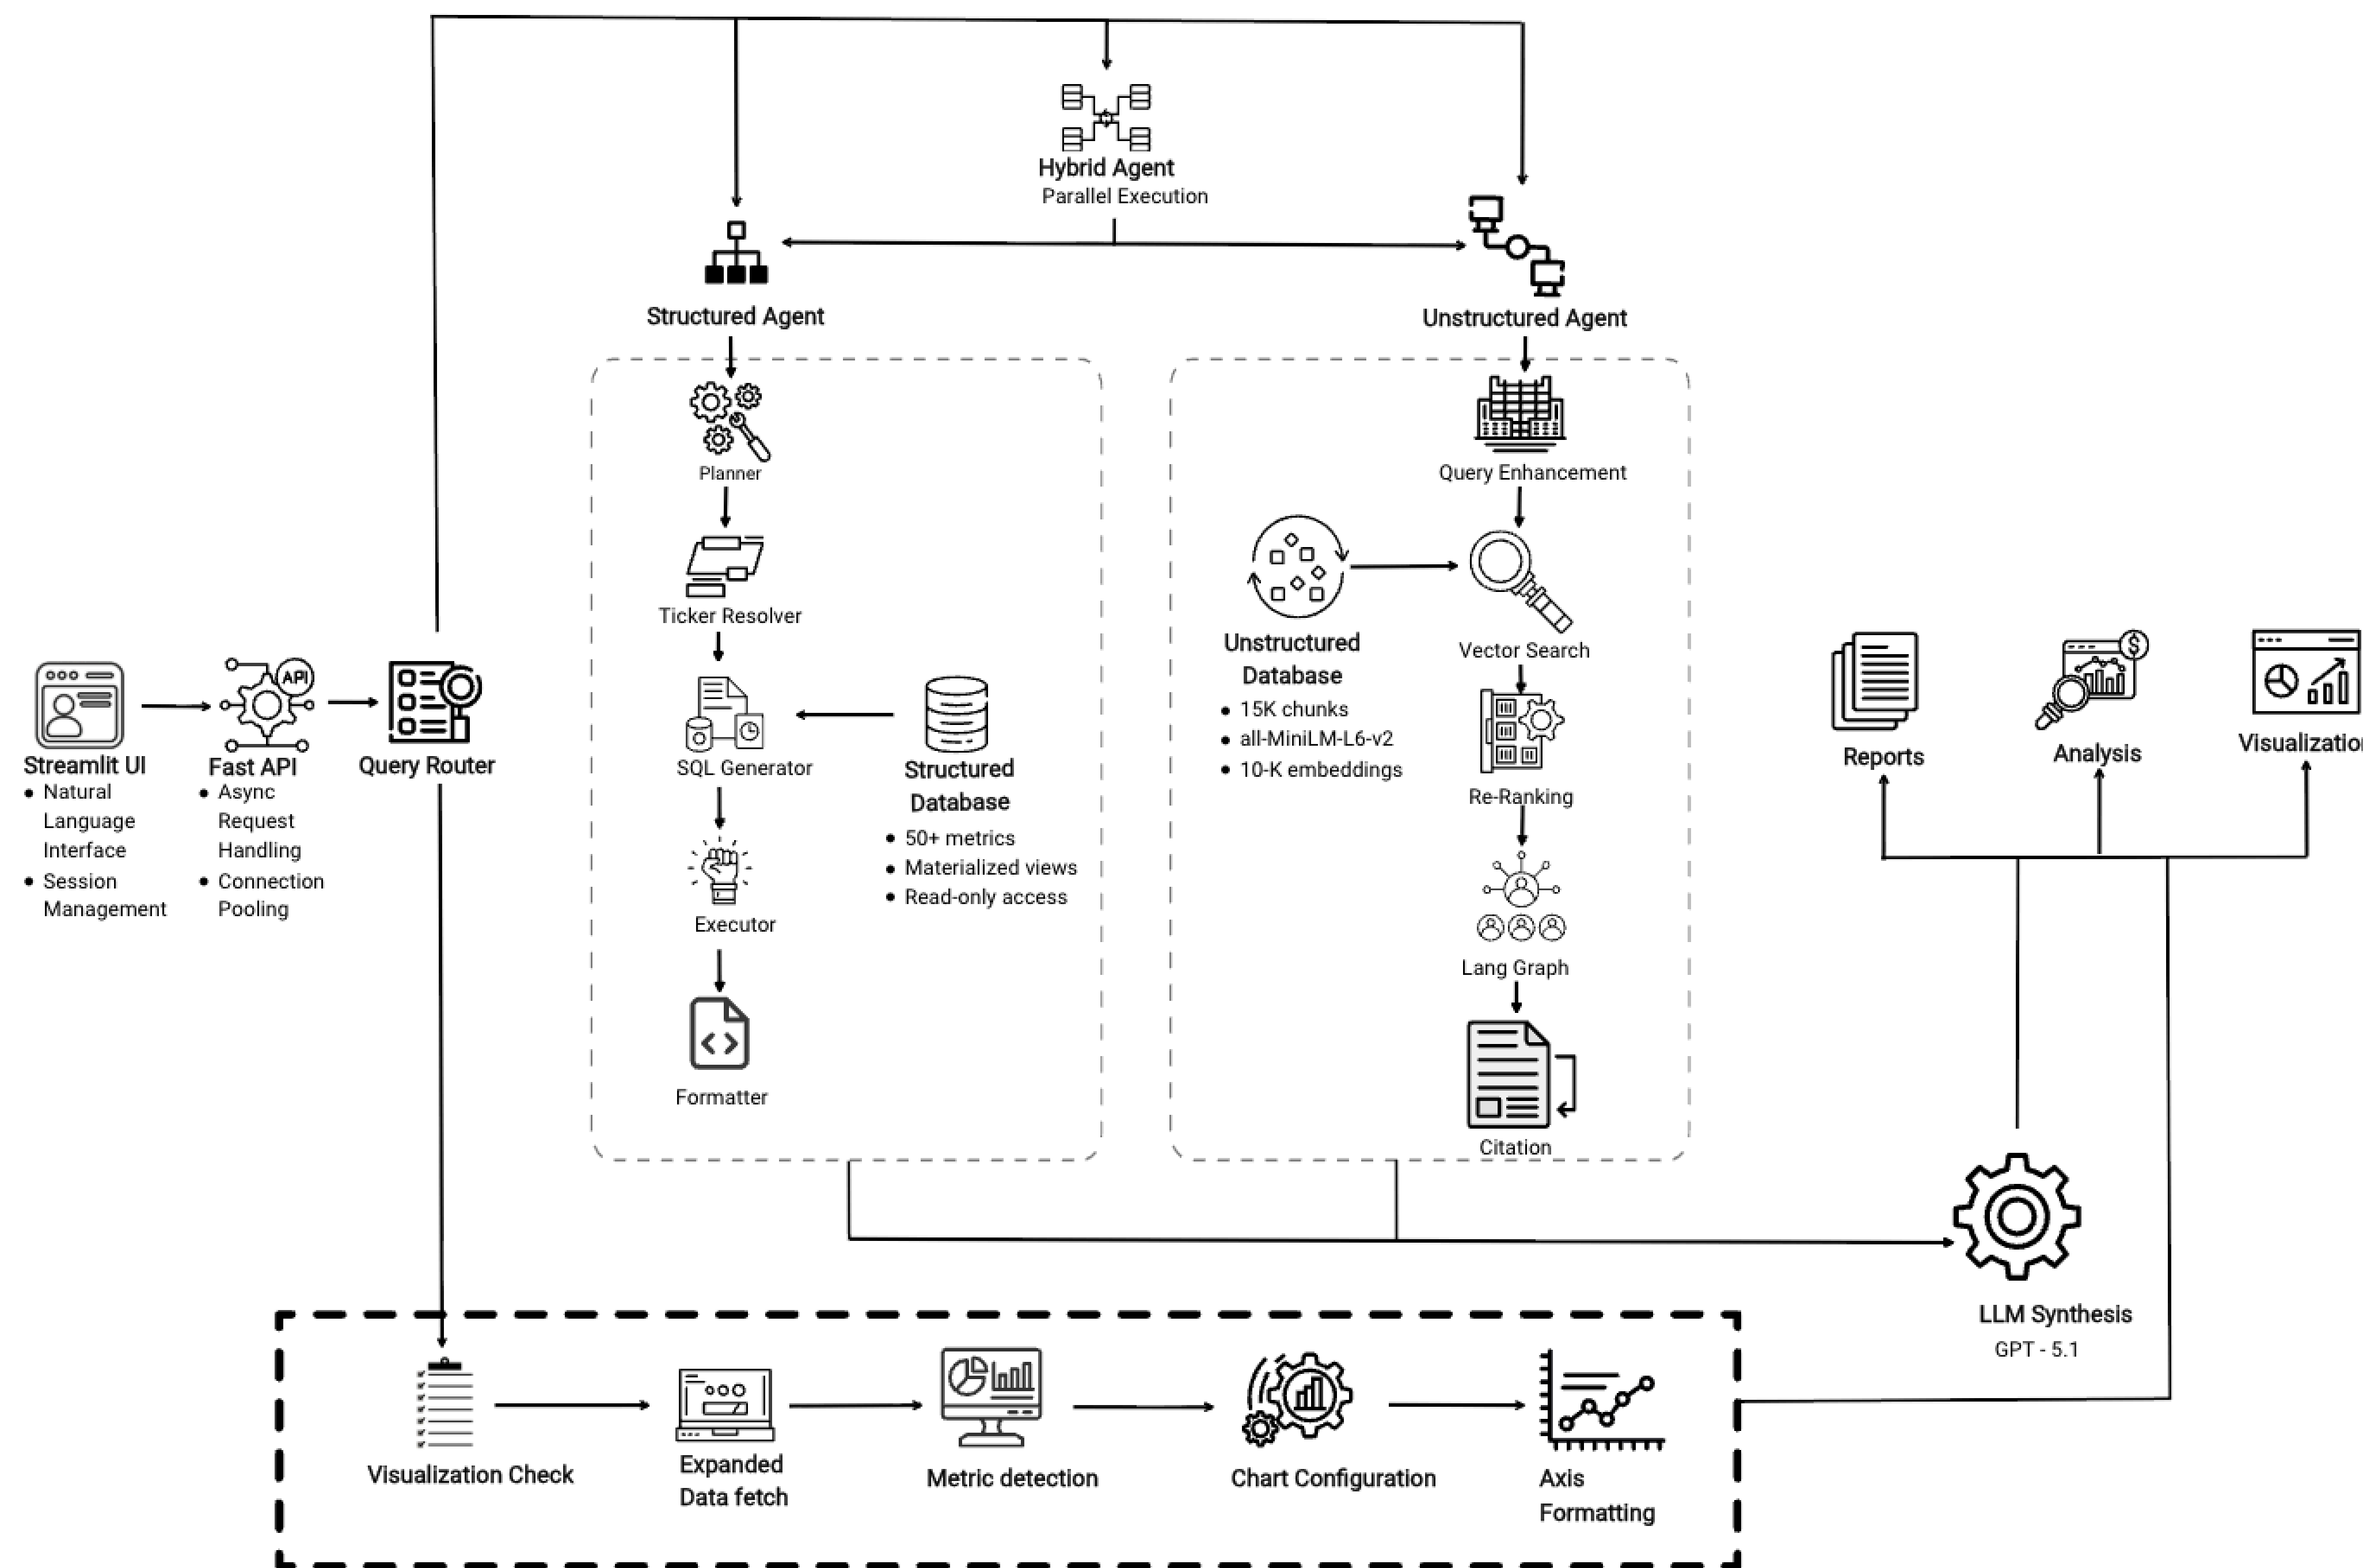

- Apple used as demo client.
- Benchmarked against Microsoft, Amazon, Google, Meta.
- 2019-2024 financials aligned across all 5 companies.
- Added macro indicators (CPI, GDP, Fed Rates, Unemployment)

### Unified Analysis Framework :

- All data mapped to a shared entity-period model.
- FIN-AI returns Apple metrics + peer benchmarks + macro trends + 10-K citations in a single natural language query.
- Hybrid SQL + RAG architecture ensures both numerical accuracy and narrative context.

Structured Data	Unstructured Data
Quarterly & annual financials (Income Statement, Balance Sheet, Cash Flow).	30 SEC 10-K filings processed (5 companies x 6 years).
50+ KPIs & 20+ ratios standardized across companies.	Extracted Item 1A (Risks), Item 7/7A (MD&A + Market Risk).
Stock prices + macro-economic	6,671 text chunks embedded

## END TO END ARCHITECTURE

## BUSINESS MODEL

### Tiered Pricing Model based on usage and team size:

Starter	\$99/month	100 queries/month	Single user, Basic analytics
Professional	\$299/month	1000 queries/month	Multi-user access, Hybrid agent, Visualizations
Enterprise	\$999/month	Unlimited queries	Custom integrations, SSO, Audit logs, Admin Dashboards.

## BUSINESS IMPACT

**99% faster analysis:** hours of financial + 10-K review reduced to 1-10 seconds.

**500+ hours** saved per reporting cycle by eliminating manual data chores.

**\$60K-\$90K annual cost** reduction from automating repetitive FP&A tasks.

**Higher decision quality:** metrics + peer benchmarks + 10-K explanations in one answer.

**Improved productivity:** frees 2-3 analysts to focus on strategy instead of data prep.

## FEATURE HIGHLIGHTS

Multi-Mode Agents	Hybrid Data Sources + Real-Time APIs	Instant Visualizations
Structured, Unstructured, and Hybrid agents work together to deliver financial metrics	Combines PostgreSQL financials, macro indicators, stock prices	Auto-generates trend charts, KPI comparisons, and peer benchmarks directly in UI

### Template-First SQL Engine (Self-Learning)

Structured agent uses 29+ SQL templates for low-latency responses; unknown queries trigger LLM-driven template creation with confidence scoring—new templates are stored automatically, making FIN-AI smarter with use.

### Semantic Search + Re-Ranking for Accuracy

Unstructured agent combines vector search with custom re-ranking to identify the correct company/year/section before reading content—ensuring precise extraction of Item 1A and Item 7/7A insights.

### Unified Hybrid Reasoning

Hybrid agent executes SQL and RAG pipelines in parallel, merges metrics with narrative context, and generates CFO-grade explanations grounded in both numbers and 10-K citations.

## RISK MANAGEMENT FRAMEWORK

- Hallucinations:** All answers grounded in SQL data + 10-K citations.
- SQL Safety:** Template-first; LLM SQL stored only if confidence >80%.
- Data Privacy:** Uses only public financial + macro data; no PII.
- Scalability:** Materialized views + pgvector indexing keep latency low.
- Bias:** 10-K narrative bias exposed via explicit citations.

## STRATEGIC GROWTH PLAN

**Real-Time Intelligence:** Live financials, stock data, and macro signals for instant decision-making.

**Knowledge Graph Reasoning:** Linked view of companies, risks, segments, and market factors for deeper insights.

**Actionable AI Agents:** Automated alerts, KPI tracking, variance explanations, and quick report generation.

### Value Proposition:

Low-cost alternative to enterprise BI + research tools (Bloomberg/FactSet), delivering CFO-grade insights at a fraction of the price.

## RESULTS

Pipeline	Latency	Success
Structured	1-2s	99%
Unstructured	3-5s	97%
Hybrid	6-10s	98%
